

Nicholas Mariani

AI technical operator and automation builder. Eight case studies with working interactive demos, readable evidence and qualified delivery claims.

The ZIP is the primary portfolio.

Google Drive does not resolve relative links inside a standalone uploaded HTML file. For the full experience, use the self-contained ZIP.

1

Download the ZIP

[Open Nicholas Mariani Portfolio.zip on Drive](#)

2

Extract it

No installer, server or build step is required.

3

Open START_HERE.html

Use the hub to run all nine demos and browse PNG/PDF evidence offline.

Every interactive screen is a synthetic reconstruction based on real delivery patterns. No production or client data is included.

A complete funnel, briefed Monday, live Thursday

Landing, VSL, opt-in, webinar page, CRM routing and follow-up for an infobusiness launch, designed, built and wired in 3 days. Walk through the funnel exactly as a lead would, then open the engine room behind it.

STACK

GoHighLevel · Airtable · webhooks · Meta Pixel · GTM

VERIFIED STATEMENT

The full path was delivered in three days.
No revenue claim is attached.

Screenshot from the included standalone demo. Synthetic interactive reconstruction based on real delivery patterns. No production or client data.

The Airtable CRM behind a seven-figure infobusiness

Marketing, sales and service used to argue with three different spreadsheets. Now they open one relational CRM: leads, applications, buyers, attribution and service cases, all connected.

STACK

Airtable · GoHighLevel · ActiveCampaign · Zapier · n8n

VERIFIED STATEMENT

Marketing, sales and service work from a shared operating record.

Screenshot from the included standalone demo. Synthetic interactive reconstruction based on real delivery patterns. No production or client data.

Installment management for a seven-figure dental agency

A seven-figure dental agency was juggling the CRM sheets of its dental clinics by hand, across 180 spreadsheets that never agreed with each other. I built the payment tooling and the pipeline that turned them into one clean operation. Today no installment slips through.

STACK

Google Workspace · Apps Script/JS · Node.js/Python ETL · APIs

VERIFIED STATEMENT

The source audit documented 178 of 180 sources (98.9% coverage).

Coverage and counts describe this synthetic sample, not a client outcome. No patient value or PII is generated.

Screenshot from the included standalone demo. Synthetic interactive reconstruction based on real delivery patterns. No production or client data.

A custom dashboard you can actually use

Revenue, cash collected, show-up rates and ad spend for multiple business units, pulled automatically from the CRM and ad platforms into one screen, with role-based views for each manager.

STACK

Next.js · Airtable API · Meta API ·
Docker/VPS · nightly sync jobs

VERIFIED STATEMENT

In production for a multi-business group;
data refreshed automatically every morning.

Screenshot from the included standalone demo. Synthetic interactive reconstruction based on real delivery patterns. No production or client data.

AI agents that work for a seven-figure infobusiness, with a leash

AI that reads, classifies and routes support and sales conversations. The nerdy part done right: confidence thresholds, structured output checks and a human approval queue, so the model never sends anything risky on its own.

STACK

n8n · LLM APIs · structured output · CRM integration

VERIFIED STATEMENT

Every decision above the risk threshold requires explicit human approval by design.

Screenshot from the included standalone demo. Synthetic interactive reconstruction based on real delivery patterns. No production or client data.

Self-hosted automation that runs every single night

Own the infrastructure, own the data: a Dockerized n8n stack on a VPS with routing, queues, retries and logging. Its reconciliation job has matched payments against the CRM every night since March 2026.

STACK
Docker · VPS · n8n · Traefik · Redis · Cloudflare Tunnel

VERIFIED STATEMENT
The nightly reconciliation workflow has run since March 2026.

Screenshot from the included standalone demo. Synthetic interactive reconstruction based on real delivery patterns. No production or client data.

Where did this lead come from? Answered

Ad spend without attribution is gambling. I joined UTMs, browser events, custom conversions and CRM stages until every lead had a source again, starting from a redirect that was silently eating the tracking parameters.

STACK

Meta Business Manager · Pixel · GTM · Cloudflare/DNS · Airtable

VERIFIED STATEMENT

Missing-UTM and routing issues were resolved, restoring usable attribution.

Stores, sites and campaigns that bring customers back

Four owned stores operated in one year, plus client work: acquisition, checkout, onboarding, retention and reactivation, the whole customer lifecycle, not just the ad.

STACK

Shopify/page builders · Meta advertising · email/SMS · automation

VERIFIED STATEMENT

Four owned stores were operated within one year. Financial performance is not claimed.

Screenshot from the included standalone demo. Synthetic interactive reconstruction based on real delivery patterns. No production or client data.

Business-first technical delivery.

Direct hands-on

Airtable, GoHighLevel, n8n, Zapier, Make, ClickFunnels, Google Workspace, Slack automation, Cloudflare, Docker/VPS, Meta Pixel, GTM, CRM and funnel operations.

AI-assisted development

Front ends, scripts, API integrations, data normalization, automation logic and operating tools built under human supervision and testing.

Working knowledge

REST APIs, webhooks, JavaScript/Apps Script, Python and Node.js-assisted workflows, HTML/CSS, SQL/data modeling, Supabase and agent architecture.

Creative tools

Adobe Premiere and Photoshop, DaVinci Resolve Studio, Higgsfield, ElevenLabs and generative models for image, video, voice, music and sound.

The portfolio qualifies AI-assisted building separately from traditional software engineering. Client names, source files, credentials, account IDs, spend, audiences and unsupported financial metrics are excluded.

Nine interactive demos. Fourteen visual assets. Six PDF boards.

The offline pack includes the START_HERE hub, nine standalone interactive HTML demos, high-resolution PNG evidence, editable SVG source files and readable PDF evidence boards.
